

**AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application:**

**LISTING OF CLAIMS:**

1. (currently amended): A plasma display panel, ~~comprising: wherein a phosphor~~  
~~constituting of said display panel is made of~~ a fluorescent layer comprising a fluorescent material  
which comprises phosphor mono-crystal particles, said mono crystal particles each having a  
diameter of 10-200 nanometers;

a reflection layer for reflecting light emitted from said phosphor material provided below  
said fluorescent layer; and

a color filter layer for selectively transmitting only a predetermined-wavelength visible  
light provided between the fluorescent layer and the reflection layer, wherein said color filter  
layer comprises an inorganic pigment having an average particle diameter of 10-200 nanometers.

2. (canceled).

3. (currently amended): The plasma display panel according to claim ~~2~~1, wherein said  
reflection layer ~~is made of~~comprises white pigment powder.

4. (canceled).

5. (canceled).

6. (currently amended): The plasma display panel according to claim 1, wherein said fluorescent layer has a ~~film~~-thickness of 0.05-1.0 ~~micrometers~~micrometers.
7. (currently amended): The plasma display panel according to claim ~~21~~, wherein said reflection layer has a ~~film~~-thickness of 1-20  $\mu\text{m}$ .
8. (canceled).
9. (currently amended): The plasma display panel according to claim ~~[[4]]~~ 1, wherein said color filter layer has a film thickness of ~~40-200 nanometers~~0.1-5  $\mu\text{m}$ .
10. (currently amended): A plasma display panel ~~in which~~comprising:
- a rear-side glass substrate provided with a plurality of data electrode-electrodes covered by a white dielectric layer; ~~and~~
- a front-side glass substrate provided with a plurality of transparent electrode-electrodes and a plurality of trace electrode-electrodes, which are covered by a protection layer and a transparent dielectric layer, wherein are both said rear-side glass substrate and said front-side glass substrates are sealed by a sealing material;[[,]] in which
- a plurality of discharge cell-cells formed between said rear-side glass substrate and said front-side glass substrate, which are separated by a partition-ispartitions formed on the white dielectric layer wherein said partitions serve as walls of the discharge cells; and
- [[,]] in which on said white dielectric and said partition is formed a fluorescent layer made of a fluorescent material covering said white dielectric layer, said partitions, wherein a

~~fluorescent layer is formed in such a manner as to cover~~ and said protection layer of said front-side glass substrate, wherein said fluorescent material of said fluorescent layer being comprises made of phosphor mono-crystal particles having a particle diameter of 10-200 nanometers and wherein said fluorescent layer is a film having a thickness of 0.05-0.5 micrometers.

11. (canceled).

12. (new): A plasma display panel, comprising: a fluorescent layer comprising a fluorescent material which comprises phosphor mono-crystal particles, said mono crystal particles each having a diameter of 10-200 nanometers;

a reflection layer for reflecting light emitted from said phosphor material provided below said fluorescent layer; and

a color filter layer for selectively transmitting only a predetermined-wavelength visible light provided between the fluorescent layer and the reflection layer, wherein said color filter layer has a thickness of 0.1-5  $\mu\text{m}$ .

13. (new): The plasma display panel according to claim 12, wherein said reflection layer comprises a white pigment powder.

14. (new): The plasma display panel according to claim 12, wherein the color filter layer comprises an inorganic pigment powder.

15. (new): The plasma display panel according to claim 14, wherein said inorganic pigment powder has an average particle diameter of 10-200 nanometers.

16. (new): The plasma display panel according to claim 12, wherein said fluorescent layer has a thickness of 0.05-0.1 micrometers.

17. (new): The plasma display panel according to claim 12, wherein said reflection layer has a thickness of 1-20  $\mu\text{m}$ .

18. (new): The plasma display panel according to claim 12, wherein said color filter layer has a thickness of 0.5-3  $\mu\text{m}$ .
